

## **Economics: Destination JAXPORT**

It is with great pleasure that the Jacksonville Port Authority and the Duval County Public Schools are entering into a partnership to improve economic education. The lessons in this program are designed for the 12<sup>th</sup> grade economics courses. Students will have the opportunity to learn about one of the largest “economic engines” on Florida’s First Coast. The economic impact of JAXPORT is over \$2.3 billion in the past year.

Students will have the opportunity to explore lessons on economic efficiency, gaining employment, derived demand and protectionism. In the future, lessons will be developed on international trade and the supply chain.

Many individuals assisted in creating Economics: Destination JAXPORT. Their assistance has proven to be invaluable in bringing this project to life.
